

# Image Editing

## **Quick Reference**

### **GIMP Menus / Windows**

### **Certification Test Goals**

This module sets out essential concepts and skills relating to the ability to understand the main concepts underlying digital images and to use an image editing application to enhance images, apply effects, and prepare an image for printing and publishing.

Successful candidates will be able to:

- · Know about the main concepts of using digital images and understand graphic format options and colour concepts.
- Open an existing image, save an image in different formats, and set image file options.
- Use built-in options such as displaying toolbars, palettes to enhance productivity.
- Capture and save an image, use various selection tools, and manipulate images.
- Create and use layers, work with text, use effects and filters, and use drawing and painting tools

Prepare images for printing or publishing.

### **Keyboard Shortcuts**

| General |        | Editing  |      |
|---------|--------|----------|------|
| Open    | Ctrl+O | Cut      | Ctrl |
| Save    | Ctrl+S | Сору     | Ctrl |
| Print   | Ctrl+P | Paste    | Ctrl |
| Close   | Ctrl+W | Zoom In  | +    |
| Undo    | Ctrl+Z | Zoom Out | -    |
| Redo    | Ctrl+Y |          |      |
| Help    | F1     |          |      |

| Selection   |              |
|-------------|--------------|
| Select All  | Ctrl+A       |
| Select None | Shift+Ctrl+A |
| Inverse     | Ctrl+I       |
|             |              |
|             |              |
|             |              |
|             |              |

**(** 

## 1 Imaging Concepts

### Digital Images

- Identify common uses of digital images like:
  - Web and print publishing Publish images to websites, social networks or photo sharing sites, or use for print publishing (magazines, brochures)

    Distribution by e-mail and mobile phone -
  - Send your images to friends, colleagues
  - Home printing Use a printer, photo printer
  - Digital photo frames Display images on a digital photo frame

### 1.1.2 Understand the terms pixel, resolution.

- Pixel the smallest part of a digital image on a screen or a single point in a raster image
- Resolution the measure of the detail quality of a digital image

### 1.1.2 Identify the key features of a digital image:

- Composed of discrete pixels Represented digitally in binary code

#### Understand the terms lossy, lossless image file compression. Lossy compres ion creates a smaller

- sized compressed file that results in a lower resolution picture with pixel loss. Loss
- ess compression ensures that the compressed data can be reconstructed to the exact original image without pixel loss

### Understand the term copyright and the implications for image use.

Copyright - the rights granted to use, publish or distribute images, or other pieces of work for a specific time period

### Understand the terms royalty-free images and rights-managed images.

- Royalty-free images incur a one-off fee that allows the user to use the image as many times as required with some restrictions.
- aged images have a copyright license which, if purchased by a user, allows the one-time use of a photo as specified by the license.

- Understand the terms raster and vector 1.2.1 graphics and distinguish between them.
  - Raster graphics represent a grid of pixels and cannot be scaled to a larger size without losing quality
  - Vector graphics created using points, lines and curves, based on mathematical equations and can be scaled to a large size without losing quality
- Identify common raster (jpeg, gif) and vector (svg, eps) formats.

| Raster File Format                      | File Extension |
|---|----------------|
| Joint Photographic Experts Group (JPEG) | .jpeg          |
| Graphics Interchange Format (GIF)       | .gif           |

| Vector File Format             | File Extension |
|--------------------------------|----------------|
| Scalable Vector Graphics (SVG) | .svg           |
| Encapsulated PostScript (EPS)  | .eps           |

### Recognize proprietary digital image editing application formats:

| File Format                  | File Extension |
|------------------------------|----------------|
| Photoshop Native Format      | .psd           |
| Paint Shop Pro Native Format | .psp           |
| GIMP Native Format           | .xcf           |
| Corel Photo-Paint Format     | .cpt           |

#### Colour Concepts 1.3

## Understand the term colour model.

· A mathematical model describing how colours can be represented as lists of numbers, typically as three or four values or colour components.

### Recognize common colour models:

- RGB Combines red, green and blue
- HSB Combines hue, saturation and brightness
- CMYK Combines cyan, magenta, yellow and key (black)

  Grayscale - Combines shades of gray,
- varying from black to white

### Understand the terms colour palette, colour depth.

- Colour palette the total colours available
- Colour depth the maximum number of

© 2013, ECDL Foundation. This Quick Reference may be used by candidates to assist in preparation for this ECDL module test. ECDL Foundation does not warrant that use of this guide will ensure passing of the test. sed with per

distinct colours that are used in an image, higher depth gives a broader range of distinct colours and a more realistic image

### 1.3.2 Understand the terms hue, saturation, colour balance.

- Hue A pure colour described by name like red or yellow
- Saturation The dominance of hue in the colour
- Colour balance The overall adjustment of the intensities of the colours

#### 1.3.2 Understand the terms contrast, brightness. gamma.

- Contrast The difference in colour and light level in an image
  Brightness - The degree to which an
- image radiates light
- Gamma The way brightness is changed for the middle range of gray tones

### 1.3.2 Understand the term transparency.

Transparency - The ability of light to transmit through an image

# 2 Image Capture

### **Capturing Image**

- Save an image from a digital camera to a location on a drive.
  - Connect the digital camera to the computer.
  - Follow the Wizard instructions to choose the image to save.
  - Select the location on the drive and save the image.

#### 2.1.2 Use the print screen facility to capture a full screen.

- Press the Print Screen key.
- Open an image editing application.
- Click the Edit menu.
- Click Paste.

#### Use the print screen facility to capture an active window.

- Open a window on the desktop.
- Press the Alt key + Print Screen key on the keyboard.
- Open an image editing application.
- Click the Edit menu.
- Click Paste.

#### Save an image from an image library, web 2.1.3 page to a location on a drive

- Right-click the image.
- Select Save image as
- Create a file name and navigate to the location required.
- Click Save.

### Open a scanning application and scan an image: preview, set scanning parameters, scan, save.

- Place the image on the scanner.
- Click scan to view options.
- Follow the instructions to choose the scanning parameters.

  Navigate to the location required to save
- the image and scan.

# 3 Using the Application

- Open an image editing application.
  - Click the Start button.
  - Select All Programs
  - Click GIMP2

#### Close an image editing application. 3.1.1

- On the File menu, click Quit.
- Open image files.On the File menu, click Open.
  - · Select file(s) to open and click Open.

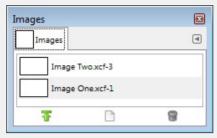

### 3.1.1 Close image files.

- On the File menu, click Close to close the current image window or Close all to close all opened images.
- Create a new image file and set options: colour model, size, resolution, background colour.
  - On the File menu, click New.

- · Set the file options.
- Click OK.

### 3.1.3 Create a new image file from clipboard.

- · Ensure an item has been copied to the clipboard.
  - On the File menu, select Create.
- Click From Clipboard.
- 3.1.4 Switch between open image files.

- On the Windows menu, select Dockable
- Click Im
- Click the image file required from the Images dialog to switch to that file.

### Save an image to a location on a drive.

- On the File menu, click
- Create a file name and navigate to the required location.
- Click Save

### Save an image under another name to a location on a drive.

- On the File menu, click Save As
- Enter a new file name over the existing file name and navigate to the location required.
- Click Sa

# Save, export an image as another file type like:

- on the File menu, click Export.
  Click the Select File Type (By Extension) dropdown menu and click a file type.
- Click Export.

- Set background colour, foreground colour.
   In the Toolbox, click the Set Background Color or Set Foreground Color option.
- Select the colour required.
- Click OK.

# Set grid properties: units, horizontal spacing,

- vertical spacing, colour.On the Edit menu, click Preference
- Click Default Grid.
  Click the Line style, Foreground color and Background color required.
- · Enter the spacing and offset required.
- Click OK.

### **Enhancing Productivity**

- Set basic options/ preferences in the application like: transparency, grid settings, measurement units.
  - To set transparency, on the Edit menu, click
  - Click Display
  - Click the transparency Check style and Check ize required.
  - Click OK.

- To set grid settings, on the Edit menu,
- click Preferences. Click Default Grid.
- Click the grid Line style, Foreground color and Background color.
- Enter the gridline spacing and offset required.
- Click OK.
- To set measurement units, on the Edit
- menu, click Units.

   Check the checkboxes for the Units required.
- Click Close

### 3.3.2 Use available Help functions.

On the Help menu, click Help.

### 3.3.3 Use magnification/zoom tools.

On the View menu, select Zoom (100%) and click Zoom Out or Zoom In.

### Use the undo, redo command,

On the Edit menu, click Undo or Redo.

### Use the undo history.

- On the Edit menu, click Undo History.
- · Select a state in the file history to revert to.

### Display, hide built-in toolbars, palettes, windows.

· On the Window menu, select/deselect appropriate toolbar, palette, window.

# 4 Working with Images

## Select an entire image, layer(s).

- To select an entire image, on the Select menu, click All.
- To select a layer, in the Layers panel, click the layer required.
- Set selection tool properties: relationship between multiple selections, feathering, antialiasing, width, height.
  - In the Toolbox, click the required Selection Tool, choosing from the Rectangle, Ellipse, Free, Fuzzy, Select by color, Scissors Select Tool.
    In the Tool Options, select the required
  - relationship between selections option. Check the feathering and antialiasing check boxes and enter the width and height required.

| Selection Tool                        | Description  |
|---------------------------------------|--|
| Rectangle /<br>Ellipse select<br>tool | Draws square or rectangular selection borders or draws round or elliptical selection borders.  |
| Fuzzy select tool<br>(Magic Wand)     | Selects pixels of similar colour with one click.   |
| Scissors select tool                  | Draws a selection border using intelligent edge fitting.                                       |
| Free select tool<br>(Lasso)           | Draws freehand selection borders.<br>This tool is great for making very<br>precise selections. |

- In the Toolbox, click the required Selection Tool
- Select a part of the image using the tool.

### 4.1.4 Inverse a selection.

- In the Toolbox, click the required Selection Tool.
- Select a part of the image using the tool.
- On the Select menu, click Invert.

### Save a selection.

- In the Toolbox, click the required Selection Tool.
- Select a part of the image using the tool.
- On the Select menu, click Save to Channel. Enter a Selection Name.
- Click OK.

#### 415 Load a saved selection

- In the Channels panel, choose the required selection.
- Click the red square icon to load the selection

### **Image Manipulation**

# Change the canvas size of an image.On the Image menu, click Canvas

- Enter the width and height required.
- Click Resize.

### 4.2.2 Resize an image in pixels, measurement units.

- On the Image menu, click Scale Image.
- Enter the width and height required. Select the required measurement unit.
- Click Scale.

## Crop an image.

- In the Toolbox, click the Crop Tool.
  Click and drag to select the part of the
- image you wish to crop using the tool.
- · Press the Return key to accept changes.

### 4.2.4 Copy image(s), selection within an image.

- In the Toolbox, click the Move Tool.
  Select the image and click Ctrl + C to copy.
- Paste the image selection into the desired location.

## Move image(s), selection within an image.

- In the Toolbox, click the Move Tool.Select the image and click and drag to

### Rotate, mirror an image, selection within an image.

- In the Toolbox, click the required Selection
- Select the image, part of image you wish to rotate, mirror.
- On the Image menu, click Transform and click the required rotation or flip (mirror) option.

#### 43

### Layers Define and understand the term layer. 4.3.1

Layers are used to separate different elements of an image and are stacked on top of each other.

### 4.3.2 Create a layer.

- On the Layer menu, click New Layer.
  Enter the Layer Name, Width, Height required.
  Check the Layer Fill Type check box required.
- Click OK

### 4.3.2 Copy a layer.

- In the Layers panel, select the layer to copy. On the Layer menu, click Duplicate Layer.
- · Edit a new layer name in the Layers dialog.

### 4.3.2 Delete a layer.

- In the Layers panel, select the layer to delete.
  On the Layer menu, click Delete Layer.

### 4.3.3 Set laver properties: name.

- In the Layers panel, double-click the layer to open layer properties.
- Edit the Layer Name
- Click OK

### 4.3.3 Set layer properties: hide, show.

In the Layers panel, click the Eye symbol to Show/Hide a layer.

## Set layer properties: lock.

In the Layers panel, click to the right of Lock to Lock pixels or Lock alpha channel.

### 4.3.3 Set layer properties: opacity.

In the Layers panel, adjust the Opacity slider to select the appropriate opacity.

## 4.3.3 Set layer properties: blending mode

- In the Layers panel, click the Mode drop-down arrow.
- · Select the appropriate blending mode.

### 4.3.4 Arrange lavers.

- On the Layer menu, click Stack
- · Select the appropriate option to Raise / Lower the laver.

## Merge layers.

- In the Layers panel, select the layer to merge.
  On the Layer menu, click Merge Down to
- merge to the layer below.

### 4.3.4 Link lavers.

In the Layers Panel, click to the right of the Eye symbol on appropriate layers to link these lavers

#### Flatten layers. 4.3.4

On the Image menu, click Flatten Image to merge all layers into one.

### 4.3.5 Transform layer(s): scale.

- Select the layer to transform.
- On the Layer menu, click Scale Layer. Enter the desired Layer Size and Quality.
- Click Scale

#### 4.3.5 Transform laver(s): rotate.

- Select the layer to transform.
- On the Layer menu, click Transform and select the appropriate layer rotation

#### 4.3.5 Transform layer(s): flip.

- Select the layer to transform.
- On the Layer menu, click Transform and select the appropriate layer flip option.

### 4.3.5 Transform layer(s): move.

- In the Layers panel, select the layer to move.
- Click the Move Tool, click and drag the layer to the required location.

## 4.3.5 Transform layer(s): trim.

- · On the Layer menu, click Layer Boundary
- In the Toolbox, click the Crop Tool
- Enter the required Layer Size and Offset. • Click Res

### 4.3.6 Convert a drawn object to a raster laver.

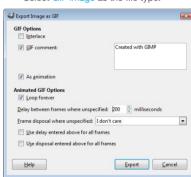

- Select a text layer.
- On the Layer menu, click Discard Text

Note: Only text layers can be converted to a raster layer in GIMP.

### 4.3.7 Create an animated gif from layers.

- On the File menu, click Exp
- Create a file name and navigate to the location required.

  • Select GIF image as the file type.

- · Check the As animation GIF Option checkbox and select any additional loop and frame delay settings.
- Click Export.

Note: You must have two or more layers to create an animated gif.

### Add text.

- In the Toolbox, click the Text Tool.
- Click and drag on the image to create a text editing region.
- On the Options bar, select text options and enter text.
- Click outside the text editing region to accept changes.

# Edit text.

- In the Toolbox, click the Text Tool.
  Double-click on existing text to open the text editing region.
- Edit the text as required.
  Click outside the text editing region to accept changes.

- 4.4.1 Delete text.

   In the Toolbox, click the Text Tool.
  - Double-click on existing text to open the text editing region.

    Delete the text as required.

  - · Click outside the text editing region to accept changes.

**(** 

### 4.4.2 Copy, move text.

- In the Toolbox, click the Text Tool.
- Double-click on existing text to open the text editing region.
- Select the text to copy, move.
- On the Edit menu, click Cut or Copy.
  Paste the text into the desired location.

### Align text: left, centre, right, justified.

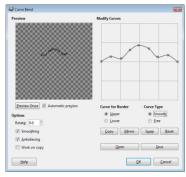

- In the Toolbox, click the Text To
- Double-click on existing text to open the text editing region.
- Select the text to align.
- In the Tool Options, select the desired justify alignment.

### Apply text formatting: font sizes, font types, font colour.

- In the Toolbox, click the Text Tool.

  Double-click on existing text to open the text editing region.
- Select the text to format.
  On the Options bar, select the desired font size, font type or font colour.
- Click OK to accept font colour changes.

### 4.4.5 Apply a text warp.

- In the Toolbox, click the Text Tool.
- Double-click on existing text to open the text editing region.
- Select the text to text warp.
- On the Filters menu, click Distorts and Curve Bend.
- Select the desired Curve and adjust settings for Border, Type and Rotate.
- Click OK.

### **Effects and Filters**

# Apply artistic, distortion effects: pixelate, emboss, wind, ripple, twirl, desaturate.Select the image, part of image using a

- Select Tool from the Toolbox
- To apply a pixelate effect, on the Filters menu, select Blur and click Pixelize. To apply an emboss effect, on the Filters
- menu, select Distorts and click Emboss.
  To apply a wind effect, on the Filters
- menu, select Distorts and click Wind. To apply a ripple effect, on the Filters menu, select Distorts and click Ripple.
- To apply a twirl effect, on the Filte menu, select Distorts and click Whirl and
- To apply a desaturate effect, on the
- Colors menu, click Desatura Adjust the settings as required.
- Click OK.

### 4.5.2 Apply blur effects: gaussian, motion.

- Select the image, part of image using a
- Select Tool from the Toolbox.
  To apply a Gaussian blur effect, on the Filters menu, select Blur and click Gaussian Blur.
- To apply a motion blur, on the Filters menu, select Blur and click Motion Blur.
- Adjust the settings as required.
- Click OK.

### 4.5.3 Apply lighting effects: lighting, flare.

- Select the image, part of image using a Select Tool from the Toolbox.
- To apply a lighting effect, on the Filters menu, select Light and Shadow and click
- To apply a flare effect, on the Filters menu, select Light and Shadow and click
- Adjust the settings as required.
- Click OK.

179431 ECDL GIMP 2.8 Ref Guide indd 4

### Apply adjustments: brightness-contrast, huesaturation, colour balance.

- Select the image, part of image using a Select Tool from the To
- To adjust brightness-contrast, on the Colors menu, click Brightne
- To adjust hue-saturation, on the Colors menu,
- To adjust colour balance, on the Colors menu, click C
- Adjust the settings as required.
- Click OK.

### Apply sharpen mask.

- Select the image, part of image using a Select Tool from the Too
- On the Filters menu, select Enhance and click
- Adjust the settings as required.
- Click OK

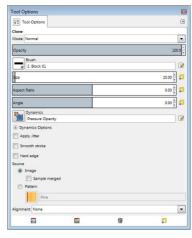

### 4.5.5 Apply unsharpen mask.

- On the Filters menu, select Enhance and click Unsharp Mask.
- Adjust the settings as required.
- Click OK

### 4.5.6 Apply red eye reduction.

- Select the image, part of image using a Select Tool from the Toolbox.
- On the Filters menu, select Enhance and click Red Eve Removal
- Adjust the settings as required.

### Clone a portion of an image using a clone tool, selecting size, opacity.

- In the Toolbox, click the Clone Tool.
- In the Tool Options, click the Opacity,
  Brush and Size required, and adjust other settings as required.
- Hold the Ctrl key and make your clone selection.
- Click the required location to place the cloned content.

## 5 Drawing and Painting

## Add a line to an image: straight line, free drawn line, curves. Set, modify line weight, style and

- In the Toolbox, click the Paintbrush Tool or
- In the Tool Options, select the desired Brush, Size, Aspect Ratio and Angle.
- Draw the line.

### Add a shape to an image: rectangle, ellipse,nshaped polygon. Set, modify line, fill style and colour.

- In the Toolbox, click the Rectangle Select
- Tool, Free Select Tool or Ellipse Select Draw the shape using the select tool.
- To create a filled shape, in the T choose a foreground color and fill the selection with the Bucket Fill Tool.
- To create an outline shape, on the Edit menu, click Stroke Selection
- Adjust the settings as required and click

### **Painting Tools**

## Pick up a colour value with the dropper.

- In the Toolbox, click the Colo
- Select the colour of the image to pick and click that colour to select.

# Fill a portion of an image with the gradient tool, selecting opacity/transparency, radial, linear, position, rotation.

- In the Toolbox, click the Blend Tool. In the Tool Options, click the required Opacity, Gradient, Shape, Repeat and Offset.
- Click the gradient start location and drag to a finish location to apply the gradient

### Colour a portion of an image with the paintbrush tool, selecting colour, shape, size

- In the Toolbox, click the Paintbrush Tool and click a Foreground Col
- In the Tool Options, click the Brush and Size required.
- · Colour the portion of the image.

### 5.2.4 Erase a portion of an image with the eraser tool, selecting its shape and size.

- In the Toolbox, click the Eraser Tool.
  In the Tool Options, click the Brush and Size
- required.
- Erase the portion of the image

### Fill a portion of an image with colour using the paint bucket tool.

- In the Toolbox, click the Bucket Fill Tool.
  Click a Foreground Color.
- Fill the portion of the image with the colour.

# **6 Prepare Outputs**

#### 61 Setup

#### Preview an image. 6.1.1

- On the File menu, click Print.
  Click the Image Settings tab to view the print preview.

### Select appropriate colour depth, resolution, image size, graphic format for web, screen, print use.

- To adjust colour depth, on the Image
- menu, click Mode.
  Click the colour depth mode required.
- To adjust resolution or image size, on the Image menu, click Scal Click the resolution or image size

**(** 

- required. To adjust graphic format, on the File menu, click Export.
- Click the graphic format required.
- · Click Export.

# Change print output orientation: portrait,

- landscape.On the File menu, click Print.
- On the General tab, click Preferences. Under Orientation, click Portrait or
- Click OK.

### 6.2.1 Change paper size.

- On the File menu, click Print.
  On the General tab, click Preferences.
  Under Paper sizes, click the paper size required.
- Click OK.

### Print an image to an installed printer using defined options, default settings.

- On the File menu, click Print.
  Select additional print options if required.
